

**Fund Objective**

A fund where 70% to 100% of the investment instruments are equities, which may be volatile in the short term. This fund seeks to provide medium to long-term capital appreciation. Dana Restu invests in Shariah-approved securities.

**Performance from 01 January 2000 - 31 December 2025**

Price (NAV-to-NAV) Performance vs Benchmark

**Investment Strategy**

The fund shall be actively managed, investing in Malaysian Shariah-approved equities with good fundamentals and growth potential. The fund aims to provide consistent long term return above the benchmark.

The fund uses top-down approach by adopting a disciplined macroeconomic framework to identify major turning points in global financial markets to determine long term assets allocation decisions. The fund also uses bottom-up approach in stock selection process which relies on qualitative and quantitative factors which are, but not limited to, financial position, valuation, company or industry risks and prospects.

**Notice:**

Actual return is based on net basis (net of tax and charges). Past Performance of the fund is not an indication of its future performance. This is strictly the performance of the unit fund, and not the returns earned on the actual premiums paid of the Investment-Linked insurance product.

**Equity**

**Market Review**

The FBMS Index +2.1% in December 2025 and ended 2025 at 12,096. Utilities and Materials are best performing sectors. On the flipside, IT, Telecom, and Consumer Discretionary lagged. Foreign investors net sold US\$502 million of Malaysia stocks in December.

**Market Outlook**

As expected, the Fed cut the federal funds rate for the third time this year by 25 bps to a range of 3.5% to 3.75%, continuing to put more emphasis on a weakening labour market though inflation remains significantly above target. Median fed funds rate expectations remain unchanged at one cut in 2026. Growth estimates for next year were revised up noticeably, helped by a catch-up effect following the end of the longest ever government shutdown. Chairman Powell noted that the fed funds rate is now considered to be in a neutral range, but the overall tone was quite dovish despite still elevated inflation rates.

The global economy has been remarkably resilient so far in 2025, with growth accelerating to a trend-like pace in the second half of the year, despite tariff headwinds. Activity has been supported by monetary easing, expansionary fiscal policy, and solid investment, in part reflecting tech related spending. We anticipate that economic activity will hold up in 2026, with growth slightly below its historical trend. Growth dynamics in the US and Europe will be supported by fiscal easing, with infrastructure and defence spending ramped up in Germany while the US sees tax cuts and investment incentives.

China's exports jumped 5.7% YoY in November, driven by strong gains to Europe of 14.8% and ASEAN of 8.2%, offsetting a steep 28% drop to the US. Auto exports soared 53%, highlighting China's growing dominance in global car markets. Yet, this export muscle masks deeper vulnerabilities at home, including sluggish demand and overcapacity. November data continued to suggest waning growth momentum across the board, with retail sales slowing to 1.3% YoY, significantly missing expectations. Despite fading growth, the December Politburo and Central Economic Work Conference offered no major policy shift, maintaining a cautious, supportive stance for 2026.

The Malaysian equity market as represented by the KLCI, delivered a strong 4.7% gain in Dec 2025, lifting its full-year 2025 performance to +2.3%. Foreign investors were the largest net sellers, with cumulative outflows rising to RM22.3 billion in 2025 which is 5.3x higher than the RM4.2 billion outflow in 2024 and the largest annual foreign net outflow since 2020. We are positive on Malaysia's equity market in 2026, supported by improving earnings visibility, resilient domestic demand, and a constructive policy environment. Other Asean markets finished positively into the year end with Singapore's STI rising 2.7% followed by Indonesia's JCI up 1.6%.

Recent Asian trade data has been strong, showing minimal "payback effect". Asia's export strength stems from the US-led AI capex boom rather than generically downplaying the impact of tariffs. Electronic exports are outperforming, reflecting robust growth in Taiwan, South Korea and Vietnam. Asean economies like Vietnam and Thailand are importing more intermediate goods, suggesting export gains stem from relocating downstream production. Positive indicators for Asian trade include rebound in container shipments to the US, Taiwan's recovering export orders, and expanding ASEAN PMIs.
